

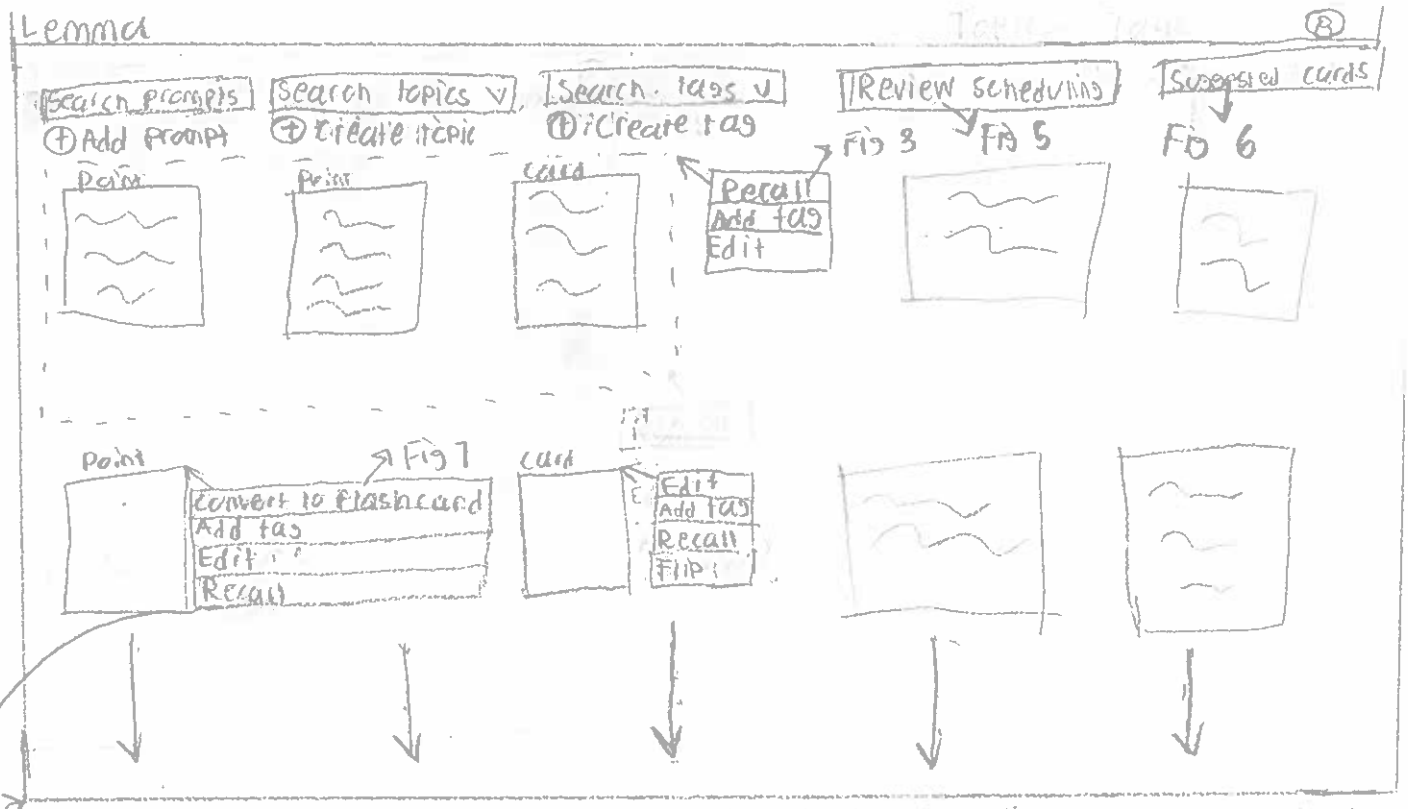

Fig 1: Main layout. Infinite scroll of both points and cards (promoted points) users create chained filters with a combination of prompt's name, topics, and tags.

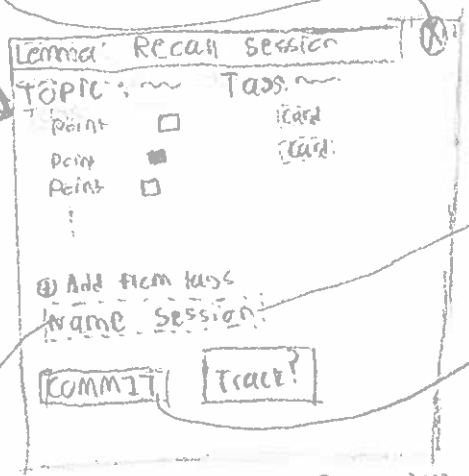

Fig 2: Recall on a prompt(s) in main layout. Triggers a precommit with the prompt pre-selected. users can pull from the prompt's topics and tags

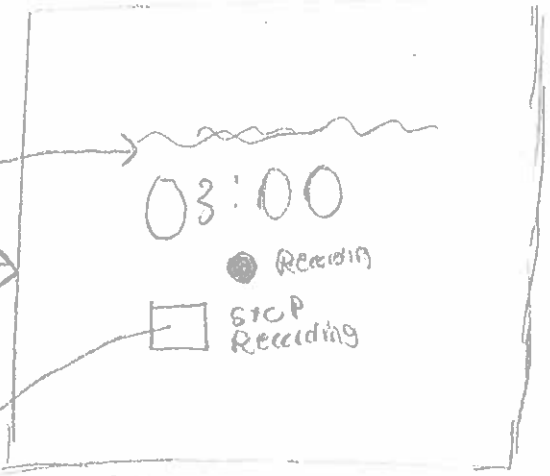

Fig 3: Recording screen, selected prompts disappear; session name optionally supplied from previous screen

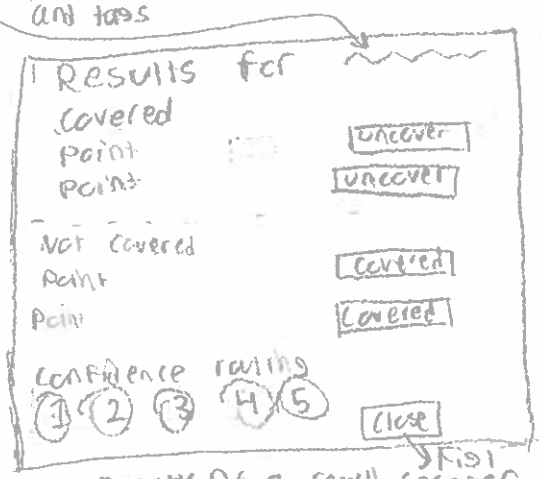

Fig 4: Results of a recall session users can correct errors in keyword matchings and rate their overall confidence

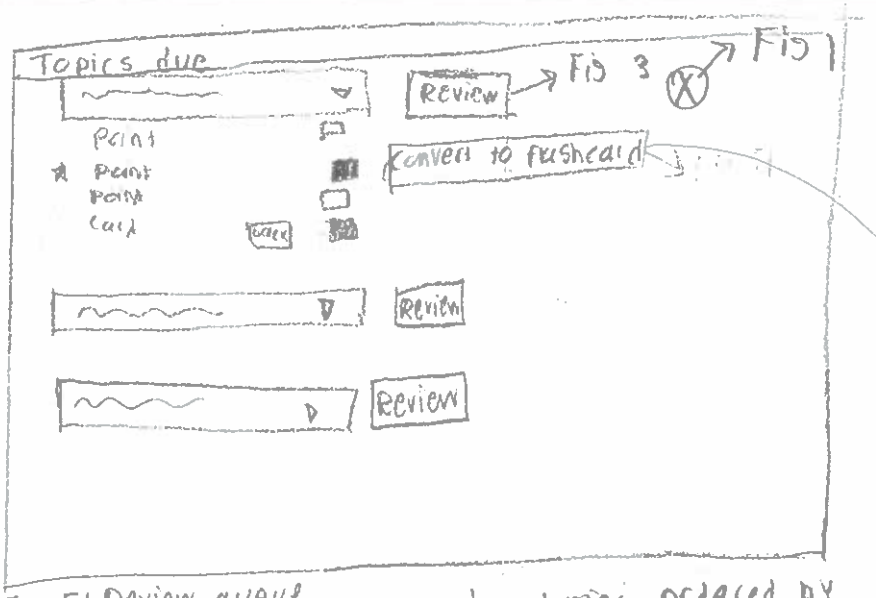

Fig 5: Review queue
User sees a subset of due topics, ordered by earliest due date. When they zoom on a topic, they can review the points due within the topic or a full review. Starred points have been missed multiple times and can be promoted into a flashcard.

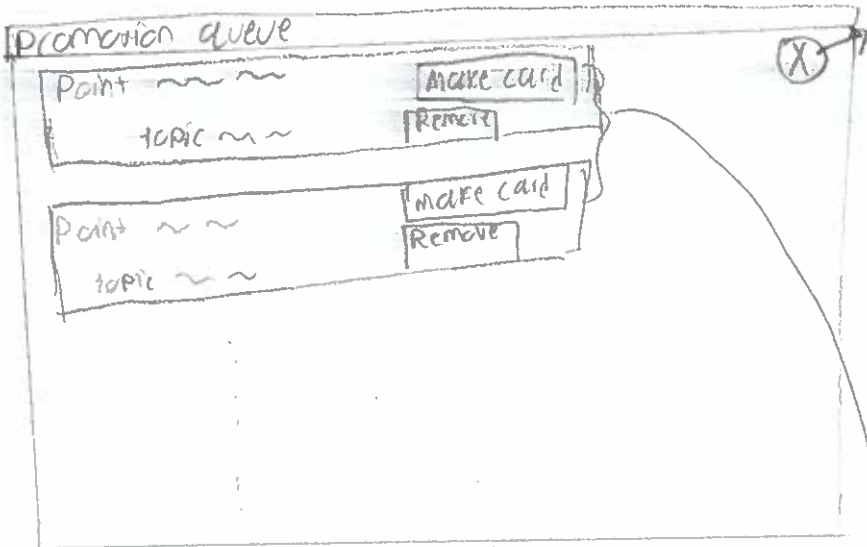

Fig 6: Authoring/conversion queue
Users see points missed across multiple recall checks in descending order of misses. They can go from here to card creation or they can dismiss the points/return home

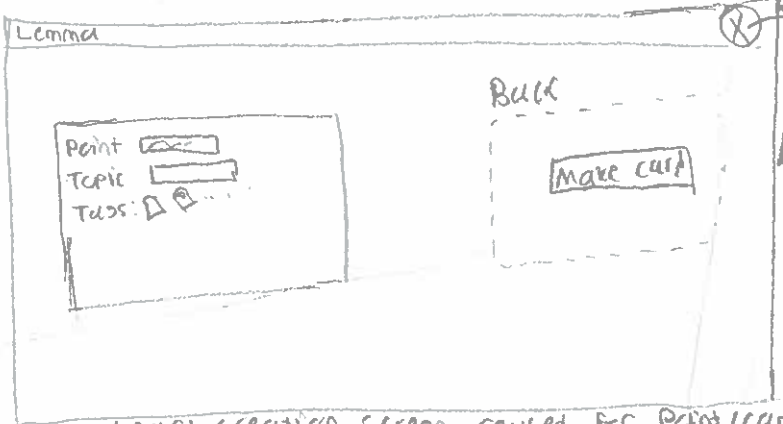

Fig 7: Card creation screen reused for point/card creation. Card creation automatically opens optional back card for a prompt
